

Ohenry Tent Products

Ohenry manufactures three different basic types of tents. Each type is designed for a specific use, which defines the need for that particular type of tent. Each type is different, with different advantages and disadvantages.

It is important to understand the type of tent you actually need in order to make the best choice when choosing your tent!

Traditional Pole type tents		
<p>Traditional pole type tents are the most popular style of tent for all sorts of uses from party tent rentals to disaster relief tents and revival tents.</p> <p>Pole type tents are extremely portable making them an ideal choice for those who have need of a party tent but have limited means of transporting their tent. You can even fit all the components of a 60x90 pole type tent in a standard 3/4 ton pickup bed.</p> <p>Traditional pole type tents provide more covered area for less money than any other type of tent. This makes a pole type tent ideal for covering extremely large areas efficiently. Ohenry pole tents are designed to be used over and over again for many years. Call us today and get your pole tent on it's way to you!</p>		<p>At Ohenry tents we have all sizes of pole type tents from traditional pole type tents to high peak tents. All tent sizes from 10x10 though 100x200 are kept in stock ready to go.</p> <p>Pole type tents are the ideal party tent choice for:</p> <ul style="list-style-type: none"> • Party tent rental • Event tents • Festival tents • Revival tents • Disaster relief tents • Tent rental • Storage tents • Commercial display tents • Party rentals • Party canopies • Auction tents
<ul style="list-style-type: none"> • Highly portable • Ease of set up • Inexpensive • Extremely versatile • Available in larger sizes 	<ul style="list-style-type: none"> • View pictorial about manufacturing process • What each new pole tent includes • Understanding Sectional pole tents 	<ul style="list-style-type: none"> • Uses center poles to support roof • Cannot be installed against a building (6' spacing required)

Frame type tents

Frame type tents were originally conceived as a design which eliminates the center pole or poles of a traditional pole tent. This is the main reason for this type tent. While eliminating the center pole can be advantageous, the frame type design creates its own set of difficulties. The biggest difference between pole and frame type tents is that frame type tents use specialized hardware, and require much more labor to install.

The frame type tent is ideal however for use indoors where staking is not possible, or in applications where a center pole is undesirable. Frame tents should be staked out just like a pole tent when used outdoors.

Frame tents are also ideal in applications where it is necessary to install the tent against a building or other structure.

advantages

- No center pole
- Installation against building possible
- Ideal for permanent set up

disadvantages

- Less portable
- Smaller sizes
- Labor intensive
- Specialized hardware

"Mystique" High Peak type tents

High peak tents are classified as "tension" tents. They are highly portable like a traditional pole type tent, and because of aerodynamic design highly resistant to extreme winds.

High peak tents are extremely desirable for weddings, and other events where an elegant look is desired. While more expensive, the high peak commands admiration.

advantages

- Extreme wind resistance
- Elegant look
- Ideal for permanent set up
- Ease of installation
- Better drainage

High peak tents are an ideal solution where the installation is expected to be long term. With the high resistance to wind, and exceptional drainage due to the steep pitch, a high peak design presents many desirable advantages over traditional pole type tents, or frame tents.

disadvantages

- More expensive
- Uses center poles to support roof
