

All OHenry Tents are made in America at our Waco Texas location. We do not import tent tops, walls, or stakes.

# OHENRY SUPERIOR MANUFACTURING PROCESS

## OHenry Pride

We take pride in our work at OHenry Productions. Each and every pole tent, and tension tent is manufactured using only the finest American made materials. OHenry Productions tents are specifically designed to withstand the abuse of multiple set-ups and tear downs, as typical tent rental companies need to do.

## Attention To Detail

All OHenry tents are hand-made, one at a time. No frantic assembly line here, with impersonal robots. No, each tent is made with lots of expert care, and attention to detail. We love our tents, and it kind of breaks our heart to have to ship a new tent out, because we know we will never see it again! In 40 years we have never had a tent returned for any defect of workmanship. We believe in quality control throughout the manufacturing process.

## OHenry Side Pole Fitting

All side pole fittings are sewn into not only the webbing that runs up the seam, but also the ring is sewn down on each side to prevent movement.

### OHenry Lace Line Corner

Here again, the detail is evident in the way the lace corner is reinforced and sewn with multiple "back-stitches". Also visible is the loop of webbing which holds the curtain rope in place. This curtain rope loop is also sewn back and forth several times.

### OHenry Grommet Line Corner

Construction here is similar to the lace line corner. Also notice the large snap which is used to snap the two sections together at the eave where the two sections meet

### OHenry Center Pole Fitting

This photo clearly illustrates the OHenry system of having lace lines on one side of the center pole fitting, with the grommet lines on the opposing side. Please notice how each webbing is turned back at the ring and sewn with multiple stitches. There is a large triangle welded to each side of the tent at the center pole to ensure triple thickness.

### OHenry Webbing Welded On

All the webbings are first sewn onto a strip of tent material, and then welded to the tent top under tension. Here at OHenry, we pioneered this process, and it has been proven to be far superior to the system used by most manufacturers who sew the webbing directly to the tent top. By welding, all needle perforation is eliminated.

### OHenry Welded 2" Seams

At OHenry, all Pole Tents and High Peak Pole Tents begin construction by having the pieces of material welded together with a 2" seam. The Industry standard is a 1" seam.

We have chosen to use a track welder system rather than welding the seams with an RF welder, as this gives us better quality control, and a superior seam.

### OHenry Lace Line System

OHenry lace lines are easy to use, and feature 100% polyester lace rope, and full weather flap. Each tent section features the lace line on the right-hand side of the center pole fitting, and the grommet line on the left hand side. This eliminates having to open sections in a certain way to have the lace and grommet lines match up. This saves time, and wear and tear on the tent.

## Ohenry Weather Flap System

You will love the Ohenry weather flap lacing system. No Velcro, snaps, or bothersome zippers.

## Ohenry Tent Graphics

At Ohenry we can design and install your graphics on your tent. In some cases, we can digitally print directly on the tent.

## World-Wide Shipping

Ohenry has a large inventory of tents ready to be shipped world-wide. Order yours today!
